

EnterprateAI

Proposal Intelligence

Marketplace proposal generation, evaluation, scenario intelligence and commercial conversion

Document: Product Requirements Document (PRD)

Version: 1.1

Status: Updated Development Baseline for Product and Technical Review

Journey status: Adopted - controlling source

Date: 1 September 2026

Product owner: Enterprate Limited

PRODUCT PRINCIPLE Marketplace Opportunity -> Proposal Generation or Upload -> Intelligent Evaluation -> Scenario Comparison -> Human Decision -> Automated Commercial Integration -> Contract -> Live Business Intelligence.

EnterprateAI guides, connects and automates the commercial decision while remaining the Decision Intelligence layer - not a full procurement or project-management system.

Document Control

Item	Definition
Controlling sources	Proposal Intelligence Management Feature - End-to-End User Journey (adopted); adopted Business Blueprints and Business Operations information architecture and UI direction
Supporting architecture	Updated Business Ontology; Real-Time Simulation Engine; Survival, Stability, Growth and Viability engine designs
Scope baseline	Product and service proposals in the EnterprateAI Marketplace
Minimum submit plan	Starter Insight or any higher eligible paid plan
Approval owner	Product owner / authorised EnterprateAI governance forum
Change control	Any change to an adopted journey rule requires explicit product approval and PRD versioning

Revision History

Version	Date	Status	Summary
1.0	31 Aug 2026	Draft	First development-ready PRD based on the adopted end-to-end journey
1.1	1 Sep 2026	Updated	Added adopted module ownership, Business Operations navigation, Procurement placement, Saved Documents repository and UI acceptance rules

Definitions

Term	Meaning
Requesting Business	The marketplace business receiving proposals.
Proposing Business	The business preparing and submitting a proposal.
Proposal Request	A general or specific invitation against which proposals are submitted.
Unsolicited Proposal	A relevant proposal submitted without a published request, where the recipient has enabled this mode.
Offering	An existing Catalogue product or service belonging to the proposing business.
Active Proposal	The current proposal submission for one proposing business and one proposal request, including all revisions.
Frozen Version	An immutable snapshot of the proposal at a submission or revision event.
Non-mutating Scenario	A hypothetical computation that does not change the live Business Ontology.

1. Executive Summary

Proposal Intelligence turns the EnterprateAI Marketplace from a passive business directory into a controlled commercial opportunity and decision-intelligence environment. A business can publicly indicate that it is Open for Proposals, configure unsolicited or solicited modes, receive generated or uploaded proposals, evaluate them with structured criteria, compare their likely business impact through non-mutating scenarios, and convert an awarded proposal into existing Vendor, Customer, Offering and Contract records.

The feature is designed as an intelligence and orchestration layer. EnterprateAI will help users prepare, assess, compare and operationalise proposals, but it will not independently award proposals, create a binding contract, or replace full procurement and project-management systems.

Version 1.1 establishes the controlling module architecture. Business Blueprints owns AI-assisted document creation and the Saved Documents repository. Business Operations owns live commercial workflows through Overview, Sales, Procurement, Contracts, Transactions and Reports. Marketplace remains the external discovery and application surface, while Proposal Intelligence and the existing intelligence engines provide evaluation, scenario comparison and recommendations across those modules.

ADOPTED COMMERCIAL RULE Only Starter Insight or a higher eligible paid plan may generate or submit proposals. New users are first captured as free accounts, their opportunity or upload is preserved, and they then receive a contextual upgrade journey.

1.1 Product Outcome

19. Increase qualified commercial activity within the Marketplace.
20. Convert high-intent visitors into registered and paid EnterprateAI businesses.
21. Improve proposal quality through structured generation, extraction and validation.
22. Give recipients explainable, scenario-based support when comparing proposals.
23. Create an automated path from proposal award to existing commercial records and live business intelligence.
24. Give each document and operational action one clear module owner while retaining end-to-end links between records.

1.2 Decision Summary

Decision	Adopted requirement
Feature name	Proposal Intelligence
Marketplace label	Open for Proposals

Decision	Adopted requirement
Proposal modes	Unsolicited; Solicited - General; Solicited - Specific; multi-select
Entry action	Apply
Submission methods	Generate with EnterprateAI or Upload Proposal
Paid access	Starter Insight or higher is required to generate or submit
Duplicate rule	One active proposal per business per proposal request, excluding revisions
Decision authority	AI recommends; authorised humans decide
Live data rule	Proposal scenarios do not mutate live ontology; confirmed contracts do
Award automation	Link or create Vendor and Customer, link Offering, create existing Contract draft
Contract control	Human review and approval are mandatory before activation
Document creation	Business Blueprints: Business Plans, Proposals, Sales Documents and Saved Documents
Operational workflow	Business Operations: Overview, Sales, Procurement, Contracts, Transactions and Reports
RFP/RFQ ownership	Create/manage under Business Operations - Procurement; generated request document is indexed in Saved Documents

2. Product Context and Problem

2.1 User Problem

Small businesses often discover opportunities through directories, email or informal networks, then prepare proposals in disconnected tools. Recipients receive inconsistent documents, have limited means to compare commercial and operational impact, and must manually recreate successful outcomes as vendors, customers, contracts and forecasts.

2.2 Product Opportunity

EnterprateAI can connect marketplace discovery, proposal preparation, structured evaluation, scenario testing and commercial record creation through its existing Catalogue, Contract, Business Ontology and intelligence engines. This creates a differentiated two-sided workflow: the proposer gets context-aware proposal preparation, while the recipient gets decision support grounded in its business state.

2.3 Problem Statement

PROBLEM Businesses need a secure and commercially credible way to invite, submit, assess and convert proposals without losing context across tools or making decisions from document quality alone.

3. Goals, Non-goals and Product Principles

3.1 Goals

25. Let a marketplace business clearly declare the proposal types it accepts.
26. Let a proposer create a proposal from approved business and Offering data or upload an external proposal.
27. Create a fair conversion path from visitor to free account to eligible paid plan.
28. Standardise proposal data without removing the submitted source document.
29. Support clarification, revision, shortlisting, comparison, negotiation, award and contract conversion.
30. Use deterministic and explainable evaluation before AI narrative assistance.
31. Preserve tenant privacy and prevent proposal data from changing live business state prematurely.
32. Separate document authoring from operational execution while keeping both connected through shared IDs and events.

3.2 Non-goals for Initial Release

33. A complete procurement suite, purchase-order system, tender portal or supplier-performance platform.
34. A project-management or delivery-tracking system.
35. Autonomous acceptance, rejection, award or contract activation.
36. Investment, grant, recruitment, sponsorship or partnership proposal types in the initial product/service scope.
37. Public exposure of private financial, Fragility, capacity or ontology data belonging to either business.
38. Legally binding electronic signature unless provided by the existing Contract feature or an approved integration.

3.3 Product Principles

Principle	Application
Intelligence, not replacement	Orchestrate existing Marketplace, Catalogue, Contract and intelligence capabilities.
Deterministic first	Use explicit eligibility, validation, scoring and scenario rules before narrative AI.

Principle	Application
Human accountable	Only authorised users select, award and activate contracts.
Hypothetical until confirmed	Submitted, shortlisted and preferred proposals remain scenario data.
Progress preserved	Signup, payment or navigation must not discard an upload or saved opportunity.
Two-sided trust	Protect both recipients from spam and proposers from hidden data exposure.
Audit by design	Material events, versions, decisions and access are traceable.
One source of truth	Business Operations owns operational status; Saved Documents indexes the document without duplicating workflow state.

4. Users, Jobs and Permissions

4.1 Primary Actors

Actor	Primary job	Key permissions
Marketplace Visitor	Discover open businesses and decide how to apply	View public profile/request; begin upload; create free account
Requesting Business Member	Configure openness and review proposals	Subject to role: manage requests, review, communicate, shortlist and compare
Requesting Business Authorised Approver	Make commercial decisions	Mark preferred, negotiate, award and approve contract
Proposing Business Member	Prepare and manage a proposal	Generate/upload, edit draft, submit, clarify, revise, withdraw
EnterprateAI Administrator/Moderator	Protect marketplace integrity	Review reports, enforce limits, suspend abuse, audit events
EnterprateAI Services	Orchestrate validation and intelligence	Only service-scoped, tenant-safe actions; no autonomous commercial decision

4.2 Role-Based Access Requirements

39. The requesting business must designate who may configure proposal settings, review, shortlist, negotiate, award and activate a contract.
40. The proposing business must designate who may draft, submit, revise and withdraw proposals.
41. Only an authorised approver may award a proposal or activate the resulting contract.
42. Users must never access proposal content belonging to another tenant unless they are a party to that proposal or an authorised moderator acting under auditable policy.

5. Scope and Release Boundaries

5.1 In Scope

- 43. Marketplace profile status and proposal-mode configuration.
- 44. General and specific proposal request creation and publication.
- 45. Marketplace discovery and Apply entry point.
- 46. Contextual signup and subscription conversion journeys.
- 47. EnterprateAI proposal generation from approved profile and Catalogue Offering data.
- 48. External PDF and DOCX upload, validation, extraction and preview.
- 49. Proposal versioning, inbox, communication, review, status management and notifications.
- 50. Structured evaluation, shortlist comparison and non-mutating scenario intelligence.
- 51. Preferred, negotiation, award and automated Vendor/Customer/Offering/Contract linkage.
- 52. Analytics, abuse controls, audit events and controlled pilot instrumentation.

5.2 Release Strategy

Phase	Capability	Release boundary
1	Marketplace, requests, upload, inbox, workflow	Operational workflow without AI generation or scenario recommendation
2	Generation and structured extraction	Paid generation; upload extraction with user confirmation
3	Evaluation, shortlist and comparison	Criteria scoring and explainable proposal comparison
4	Scenario and engine integration	Non-mutating Survival, Stability, Growth and Fragility impacts
5	Award and commercial integration	Automated links and existing Contract draft with human activation

6. Adopted End-to-End Journey

6.1 Stage Map

Stage	Primary actor	System outcome
1. Configure	Requesting Business	Open for Proposals modes and preferences are published
2. Discover	Visitor/Proposer	Public profile or request is found and Apply is selected
3. Choose method	Visitor/Proposer	Generate or Upload path is selected
4. Convert access	EnterprateAI	Signup and contextual upgrade occur where required; progress is preserved
5. Prepare	Proposing Business	Proposal is generated or extracted, reviewed and approved
6. Validate and submit	EnterprateAI	Eligibility, relevance, safety, deadline and duplicate rules pass; frozen version created
7. Review	Requesting Business	Proposal enters inbox; clarification, revision, shortlist or decline follows
8. Evaluate	EnterprateAI + Recipient	Criteria evaluation and non-mutating scenario comparison support the decision
9. Negotiate and award	Authorised users	Final version is confirmed and awarded
10. Convert	EnterprateAI	Vendor, Customer and Offering are linked; existing Contract draft is created
11. Activate	Authorised users	Contract is reviewed/activated; live ontology and intelligence are updated

6.2 Marketplace Status Derivation

Selected modes	Marketplace status
None	Not Currently Open for Proposals
Unsolicited only	Unsolicited Proposals Accepted
General and/or Specific, without Unsolicited	Solicited Proposals Only
Unsolicited plus General and/or Specific	Open to All Relevant Proposals

6.3 Adopted Information Architecture and Module Ownership

ARCHITECTURE RULE Create and manage the document in Business Blueprints; execute and monitor the commercial workflow in Business Operations; expose opportunities in Marketplace; evaluate decisions through Proposal Intelligence.

Module / surface	Owns	Proposal Intelligence responsibility
Business Blueprints	AI-assisted document creation: Business Plans, Proposals, Sales Documents and Saved Documents	Generate/edit proposal and request documents; preserve reusable and approved document versions
Business Operations - Sales	Outgoing quotations, sales activity and submitted commercial responses	Show proposer-side pipeline and link submitted proposals without duplicating the proposal record
Business Operations - Procurement	RFP/RFQ creation, publication, received proposals/quotations, evaluation, shortlist, negotiation and award	Primary requesting-business operational workspace
Business Operations - Contracts	Existing Contract records, drafts, approvals, activation, renewal and expiry	Receive the automated draft created from the awarded proposal
Business Operations - Transactions	Invoices, expenses, receipts and payment events	Confirmed actuals update live financial and intelligence state
Business Operations - Reports	Operational reporting across sales, procurement, contracts and transactions	Proposal funnel, decision, award and conversion reporting
Marketplace	Public discovery, Open for Proposals status, request details and Apply entry point	External acquisition and submission entry surface
Catalogue	Offerings, Customers and Vendors	Provide proposer Offering and automated Vendor/Customer linkage
Decision Intelligence	Fragility, scenario comparison, engine assessments and recommendations	Analyse shortlisted proposals without mutating live state

Navigation rules

53. Business Operations top-level tabs are Overview, Sales, Procurement, Contracts, Transactions and Reports.
54. Business Blueprints top-level tabs are Overview, Business Plans, Proposals, Sales Documents and Saved Documents.
55. RFP and RFQ operational records are created and managed in Procurement. If an AI-assisted request document is generated, it is stored and discoverable in Saved Documents with a link back to its Procurement record.

- 56. Proposal drafts and generated proposal documents are created in Business Blueprints - Proposals and indexed in Saved Documents. Once submitted, their operational status and recipient actions are controlled by the linked Sales or Procurement record.
- 57. Contracts are not recreated inside Proposal Intelligence. Award opens the existing Business Operations - Contracts workflow and creates a reviewable draft.
- 58. Navigation must support contextual deep links between the document, operational record, Marketplace request, Offering, Vendor/Customer, evaluation and Contract without creating duplicate sources of truth.

7. Detailed Functional Requirements

7.0 Cross-Module Architecture Requirements

ID	Requirement	Priority
PI-IA-001	Business Blueprints shall own proposal, request and sales-document authoring and Saved Documents indexing.	Must
PI-IA-002	Business Operations - Procurement shall own RFP/RFQ workflow status and recipient-side proposal management.	Must
PI-IA-003	Business Operations - Sales shall expose proposer-side submitted proposal and quotation activity through links to the canonical records.	Must
PI-IA-004	Business Operations - Contracts shall use the existing Contract feature for draft, approval and activation.	Must
PI-IA-005	Saved Documents shall provide a unified searchable index without becoming the source of truth for operational statuses.	Must
PI-IA-006	Every cross-module representation shall use stable shared entity IDs and contextual deep links rather than copied records.	Must
PI-IA-007	Marketplace shall remain the public discovery and Apply surface; private review and decision actions shall require authenticated Business Operations access.	Must
PI-IA-008	Transactions and Reports shall consume confirmed proposal/contract events without receiving proposal-authoring responsibilities.	Must

7.1 Marketplace Settings and Publication

ID	Requirement	Priority
PI-FR-001	A business can enable or disable Open for Proposals from Marketplace profile settings.	Must
PI-FR-002	A business can select one or more modes: Unsolicited, Solicited-General, Solicited-Specific.	Must
PI-FR-003	The system derives and displays the public status from the selected modes.	Must

ID	Requirement	Priority
PI-FR-004	Disabling the feature removes the public Apply action but preserves historical requests and proposals.	Must
PI-FR-005	Only authorised business roles may change proposal settings or publish a request.	Must
PI-FR-006	Settings changes are written to the audit history with actor and timestamp.	Must

7.2 Proposal Modes and Request Configuration

Operational RFP/RFQ creation and management occurs in Business Operations - Procurement. Where the user chooses AI-assisted drafting, the request document is generated through Business Blueprints, saved in Saved Documents and linked to the canonical Procurement request before publication.

Unsolicited

Unsolicited preferences are optional, but any supplied preference becomes a validation and relevance signal. The business may set accepted or excluded categories, business needs, supplier eligibility, delivery model/location and a total receipt cap.

Solicited - General

A standing invitation must include a general business need, relevant categories, desired outcomes, supplier requirements and evaluation priorities. It may remain open until paused or until a configured expiry date.

Solicited - Specific

A specific request must include title, problem or desired outcome, scope, deliverables, timing, supplier eligibility, evidence, evaluation criteria and deadline. Budget range may be hidden, optional or visible according to recipient choice.

ID	Requirement	Priority
PI-FR-010	A general or specific request receives a unique immutable request ID.	Must
PI-FR-011	The recipient can save a request as draft, publish, pause, close, expire or archive it.	Must
PI-FR-012	Published changes that affect existing proposers create a request revision and notification.	Must
PI-FR-013	The recipient may cap total proposals accepted for a request; the system closes intake at the cap.	Should
PI-FR-014	A request may be public, invite-only or hidden from search while accessible by direct link.	Should
PI-FR-015	A request can specify mandatory pass/fail requirements and weighted evaluation criteria.	Must
PI-FR-016	Each request document stored in Saved Documents links to exactly one canonical Procurement request record and displays its current operational status read-only.	Must

ID	Requirement	Priority
PI-FR-017	Publishing, pausing, closing, expiring and archiving a request are Procurement actions, not Saved Documents actions.	Must

7.3 Marketplace Discovery and Apply

ID	Requirement	Priority
PI-FR-020	Marketplace cards and profiles display Open for Proposals and the derived status.	Must
PI-FR-021	Visitors can filter or search by proposal mode, category, location/delivery model and deadline.	Should
PI-FR-022	Solicited requests expose only information deliberately published by the requesting business.	Must
PI-FR-023	Selecting Apply opens a method chooser for Generate with EnterprateAI or Upload Proposal.	Must
PI-FR-024	The chooser identifies the receiving business/request and discloses the paid-plan requirement.	Must

7.4 Access, Signup and Subscription Conversion

ADOPTED CONVERSION PATTERN Signup first -> save opportunity or upload -> contextual upgrade -> return directly to the proposal.

User state	Generate path	Upload path
New visitor	Create free account; save recipient/request; show contextual upgrade; generate only after payment	Upload, scan, extract and preview first; require signup at Submit; then contextual upgrade
Existing Free user	Show contextual upgrade immediately	Allow upload/review; require upgrade at Submit
Eligible paid user	Proceed directly to generation	Proceed directly to validation and submission

59. The upgrade screen must show the receiving business and proposal opportunity, preselect Starter Insight as the recommended minimum, provide monthly/annual billing and expose Compare Plans.
60. The user must not be redirected to a generic pricing page.
61. All progress must survive signup, payment, cancellation, return navigation and a reasonable session-resumption period.
62. Payment success returns the user to the exact saved workflow state; payment failure preserves the draft and provides retry.

7.5 Generate with EnterprateAI

The generation workspace is Business Blueprints - Proposals. Completed and in-progress proposal documents are indexed in Saved Documents; submission creates or updates the linked proposer-side Sales activity and recipient-side Procurement submission.

63. The paid proposer selects an existing Catalogue Offering or creates a new product/service Offering.
64. The system retrieves only approved business-profile and Offering data belonging to the proposer.
65. The system maps the request requirements to available proposer data and identifies missing information.
66. The user supplies or confirms missing data before generation.
67. The generator creates a structured draft containing executive summary, requirement response, solution, deliverables, price, payment terms, timeline, capability evidence, assumptions, dependencies, exclusions and validity.
68. The proposer can edit and preview the draft, and must explicitly approve it before submission.
69. Generated statements must be traceable to user-approved inputs; unsupported claims are flagged for confirmation.

ID	Requirement	Priority
PI-FR-030	Proposal generation is unavailable on the Free plan.	Must
PI-FR-031	Generation is scoped to the selected recipient, request and Offering.	Must
PI-FR-032	Private metrics are not inserted unless the proposer explicitly approves disclosure.	Must
PI-FR-033	The draft records generator/model version and source field references for audit.	Should
PI-FR-034	The proposer can save, resume, edit and delete an unsubmitted draft.	Must
PI-FR-035	A generated proposal appears in Saved Documents with document type, version, authoring status, updated timestamp and linked operational usage.	Must

7.6 Upload Proposal

70. A new visitor may upload PDF or non-macro DOCX without first creating an account.
71. The platform scans and validates the file, extracts structured proposal fields, and displays extraction confidence.
72. The user corrects missing or inaccurate extracted information and previews the structured summary.

73. The original uploaded file remains preserved as the source artifact.
74. At Submit, a new visitor creates a free account; the upload and opportunity are bound to that account; upgrade follows.
75. An eligible paid user confirms the extracted data and submits directly.

ID	Requirement	Priority
PI-FR-040	Accept PDF and non-macro DOCX only in the initial release.	Must
PI-FR-041	Reject encrypted, corrupt, executable, macro-enabled or unsafe files with a clear reason.	Must
PI-FR-042	A temporary anonymous upload is protected by a short-lived signed token and transferred to the new account after signup.	Must
PI-FR-043	Anonymous uploads expire and are deleted according to the retention policy if signup is not completed.	Must
PI-FR-044	Low-confidence extraction fields require user confirmation before submission.	Must

7.7 Validation, Submission and Versioning

Before submission, EnterprateAI validates account and plan eligibility, profile completion, relevance, required data, file safety, duplicate content, deadline, recipient cap and the active-proposal rule.

ADOPTED DUPLICATE RULE One active proposal per business per proposal request, excluding revisions.

ID	Requirement	Priority
PI-FR-050	A proposer cannot create a second active proposal for the same request.	Must
PI-FR-051	A revision remains under the same proposal ID and creates a new immutable ProposalVersion.	Must
PI-FR-052	The submitted version is frozen with checksum, author, timestamp and source method.	Must
PI-FR-053	Plan allowances govern how many different requests the business may respond to, not duplicate submissions to one request.	Must
PI-FR-054	The system prevents double submission through idempotency and displays the existing active proposal.	Must
PI-FR-055	The proposer receives a durable submission receipt and the recipient is notified.	Must

7.8 Proposal Inbox, Review and Communication

The requesting-business inbox and all evaluation, shortlist, negotiation and award actions are provided within Business Operations - Procurement. The proposing business views its submitted proposal activity within Business Operations - Sales. Both surfaces reference the same canonical ProposalSubmission and ProposalVersion records.

Recipient capability	Required behaviour
View	Show proposer, Offering, structured summary, document, terms, evidence, status and intelligence confidence.
Clarify	Open a threaded question; record response without altering the frozen version.
Request revision	State requested changes and due date; proposer creates a new version under the same proposal.
Shortlist	Mark for comparison and enable scenario intelligence when required data is sufficient.
Save for later	Retain in a private review state without changing proposer rights.
Decline	Close the recipient review path; optional reason may be shared with proposer.
Report/block	Prevent further interaction according to moderation rules and preserve evidence.
Negotiate	Open negotiation state and allow controlled scope/price/timeline/term revisions.

76. Every material communication is timestamped and linked to the proposal and current version.

77. A proposer can respond, revise, view status or withdraw; withdrawal does not delete the audit trail.

78. Read receipts and status visibility must respect recipient privacy settings while clearly confirming successful submission.

7.9 Notifications

Event	Recipient	Channel
Proposal submitted	Requesting business	In-app + email
Proposal viewed/status changed	Proposing business	In-app; email configurable
Clarification/revision requested	Proposing business	In-app + email
Clarification/revision received	Requesting business	In-app + email
Deadline approaching	Relevant party	In-app + email according to preference
Preferred/negotiation/award/decline	Other party	In-app + email
Contract draft/activation	Authorised parties	In-app + email

7.10 Saved Documents Repository

ID	Requirement	Priority
PI-FR-060	Saved Documents shall index Business Plans, Proposals, Sales Documents and Request Documents owned or created by the tenant.	Must

ID	Requirement	Priority
PI-FR-061	Users can search, filter and sort by document name, type, authoring status, owner and recently updated date.	Must
PI-FR-062	Each document displays its operational usage, such as Not Sent, Sales, Procurement, Live Business Plan or Contract, as a contextual link.	Must
PI-FR-063	Operational status is read-only in Saved Documents and is resolved from the linked canonical Business Operations record.	Must
PI-FR-064	Document actions include Open, Continue, Review, Preview, Export and Archive according to role, type and authoring status.	Must
PI-FR-065	Archiving a Saved Document shall not delete or alter an active Procurement, Sales or Contract record.	Must
PI-FR-066	Document Intelligence may flag drafts requiring review but shall not publish, submit, award or activate records automatically.	Must

8. Proposal Status Model

8.1 Canonical Statuses

Status	Meaning	Permitted next states
Draft	Not submitted; editable by proposer	Submitted, Deleted
Submitted	Frozen version delivered	Viewed, Withdrawn, Expired
Viewed	Recipient opened proposal	Under Review, Clarification Requested, Revision Requested, Declined
Under Review	Recipient actively assessing	Clarification Requested, Revision Requested, Shortlisted, Declined
Clarification Requested	Question outstanding	Under Review, Revision Requested, Withdrawn
Revision Requested	New proposal version requested	Revised, Withdrawn, Expired
Revised	New frozen version submitted	Viewed, Under Review, Shortlisted, Declined
Shortlisted	Eligible for comparison/scenario	Preferred, Under Review, Declined
Preferred	Current leading option; not an award	Negotiation, Shortlisted, Declined
Negotiation	Commercial terms being refined	Revised, Awarded, Declined, Withdrawn
Awarded	Final proposal version selected	Contract Drafted
Contract Drafted	Existing Contract feature contains a draft	Contracted, Negotiation, Archived
Contracted	Contract confirmed/active	Archived
Declined	Recipient ended consideration	Archived

Status	Meaning	Permitted next states
Withdrawn	Proposer ended consideration	Archived
Expired	Deadline/validity elapsed	Archived; reopen only by authorised rule
Archived	Read-only historical state	None

8.2 Status Rules

- 79. Status transitions are enforced server-side; clients cannot write arbitrary statuses.
- 80. A transition records actor, prior status, next status, reason, proposal version and timestamp.
- 81. Preferred and Awarded are distinct; Preferred creates a high-confidence forecast but not a confirmed commitment.
- 82. Awarded freezes the selected proposal version. Any subsequent commercial change requires a controlled revision or contract amendment path.
- 83. Alternative endings remain Declined, Withdrawn, Expired and Archived.

9. Data and Ontology Design

9.1 New Core Entities

Entity	Purpose	Essential attributes
ProposalPreference	Business-level Open for Proposals configuration	business_id, enabled, modes[], categories, exclusions, eligibility, caps, visibility
ProposalRequest	General or specific solicitation	id, requester_business_id, type, title, need, scope, budget, dates, deadline, status, visibility
ProposalRequirement	Mandatory or scored requirement	request_id, type, description, mandatory, weight, evidence_required
ProposalSubmission	One active proposal relationship	id, request_id/recipient_id, proposer_business_id, offering_id, current_version_id, status
ProposalVersion	Immutable submitted/revised snapshot	id, proposal_id, version_no, method, structured_payload, checksum, submitted_by/at
ProposalAttachment	Original or supporting file	version_id, object_key, mime_type, size, checksum, scan_status, retention
ProposalMessage	Clarification/negotiation thread	proposal_id, version_id, sender, type, body, visibility, timestamp
DocumentRecord	Saved Documents index for tenant-owned authored documents	id, tenant_id, document_type, current_version_id, authoring_status, operational_entity_type/id, owner, updated_at, archived_at

Entity	Purpose	Essential attributes
EvaluationCriterion	Recipient scoring definition	request_id, name, mandatory, weight, scale, guidance
ProposalEvaluation	Evaluation result	proposal_version_id, assessment_id, scores, failed_requirements, confidence, ruleset_version
ProposalDecision	Preferred/award/decline decision	proposal_id, version_id, decision_type, rationale, actor, timestamp
ProposalEvent	Immutable event history	proposal_id, event_type, actor, payload, correlation_id, timestamp

9.2 Existing Entity Integration

Existing entity	Integration rule
Business	All parties use unique Business IDs; never match by display name alone.
Offering	Generated proposals reference an existing or newly created proposer Offering.
Opportunity	On submission, create/link a proposer-side prospective deal; recipient request remains a ProposalRequest.
DemandEvidence	Viewed, clarified, shortlisted and awarded events may create progressively stronger evidence with clear verification state.
Vendor	At award, link existing Vendor in the requesting business Catalogue or create one from approved Marketplace data.
Customer	At award, link existing Customer in the proposer Catalogue or create one from approved Marketplace data.
Contract	Use the existing Contract feature; create a draft populated from the awarded version and link all commercial entities.
Invoice/Expense/Receipt	Confirmed contract activity may create or link operational transactions; only recorded actuals update actual financial state.
Scenario	Shortlisted proposal assumptions become Scenario and ScenarioChange records without altering live state.
Assessment	Evaluation and engine runs store ruleset, confidence, inputs and outputs for audit.
Recommendation	Decision narrative is linked to the relevant assessment and proposal version.

9.3 Relationship Rules

84. A Business has one current ProposalPreference and many preference audit versions.
85. A ProposalRequest belongs to one requesting Business and has many requirements and submissions.

- 86. A ProposalSubmission belongs to one proposer Business and one recipient/request context, and has many versions, messages, evaluations and events.
- 87. A ProposalVersion may have many attachments and exactly one structured proposal snapshot.
- 88. A ProposalDecision always references the exact frozen ProposalVersion used for the decision.
- 89. An awarded proposal links to one existing Contract draft, one Vendor from the requester perspective, one Customer from the proposer perspective and the relevant Offering.
- 90. A DocumentRecord indexes one current authored document version and may link to one canonical Procurement, Sales, Contract or Live Business Plan record; it never owns that record's operational status.

9.4 Data State and Mutation Rules

Proposal stage	Ontology treatment
Draft	Private work-in-progress; no scoring impact
Submitted	Structured analysis and Opportunity/DemandEvidence signal; no live financial mutation
Shortlisted	Non-mutating Scenario/SimulationRun allowed
Preferred	High-confidence forecast only; clearly labelled hypothetical
Awarded	Create/link commercial records and Contract draft; commitment remains pending
Contracted	Confirmed commitment enters live ontology and may update forecasts, Live Business Plan KPIs and engine assessments
Invoice/payment	Only recorded actual transactions update actual revenue, expense and cash positions

9.5 Event Model

At minimum, emit: preference.updated, request.draft_created, request.published, request.revised, request.closed, document.saved, document.version_created, document.archived, proposal.draft_created, proposal.uploaded, proposal.generated, proposal.submitted, proposal.viewed, proposal.clarification_requested, proposal.revision_requested, proposal.revised, proposal.shortlisted, proposal.preferred, proposal.negotiation_started, proposal.awarded, proposal.declined, proposal.withdrawn, proposal.expired, vendor.linked_or_created, customer.linked_or_created, contract.draft_created, contract.activated and transaction.recorded.

Every event must include tenant, actor/service identity, entity IDs, proposal version, correlation/idempotency key and timestamp. Personally sensitive or confidential document content must not be copied into event logs.

10. Proposal Evaluation and Decision Intelligence

10.1 Evaluation Pipeline

91. Gate 1 - Data sufficiency: verify required fields, readable source, extraction confidence and current version.
92. Gate 2 - Mandatory compliance: pass/fail each mandatory request requirement before weighted scoring.
93. Gate 3 - Weighted evaluation: score requirements fit, commercial value, delivery feasibility, evidence, operational risk and strategic impact.
94. Gate 4 - Scenario mapping: create non-mutating financial, capacity and dependency changes for shortlisted proposals.
95. Gate 5 - Multi-scenario comparison: base, downside, expected and upside outcomes.
96. Gate 6 - Explainable recommendation: present ranking, assumptions, missing data, confidence, trade-offs and risk/score deltas.

10.2 Evaluation Dimensions

Dimension	Illustrative measures	Treatment
Mandatory requirements	Eligibility, required evidence, deadline, essential deliverables	Pass/fail; failure is flagged, not hidden by aggregate score
Requirements fit	Coverage, solution relevance, deliverable alignment	Weighted score
Commercial value	Total cost, recurring cost, terms, value for money	Weighted score + scenario inputs
Delivery feasibility	Timeline, capacity, staffing, dependencies	Weighted score + Stability inputs
Evidence and credibility	Relevant experience, verification, completeness	Weighted score + confidence adjustment
Operational risk	Supplier dependency, implementation workload, failure exposure	Risk-adjusted score
Strategic impact	Outcome alignment, efficiency/revenue effect, growth contribution	Weighted score + Growth inputs

10.3 Scenario Mapping

Proposal input	Scenario variable/effect	Engine relevance
Price and payment terms	Projected outflows/inflows and timing	Survival; cash runway; Fragility

Proposal input	Scenario variable/effect	Engine relevance
Delivery and implementation costs	Fixed/variable cost changes	Viability; Survival
Expected benefits	Revenue, efficiency or cost-saving assumptions	Viability; Growth
Resource/staffing requirements	Capacity, payroll/contractor cost	Stability; Survival
Supplier reliance	Dependency and single-point-of-failure exposure	Stability; Fragility
Delivery timeline	Forecast periods and benefit-realisation dates	All relevant engines
Evidence quality	Confidence weighting and missing-data warnings	Assessment confidence layer

10.4 Recommendation Output

97. Recommended proposal or explicit statement that no proposal can be recommended.
98. Reasons tied to evaluation criteria and scenario results.
99. Key trade-offs and why a lower-priced proposal may not be the best option.
100. Assumptions, missing information, source confidence and overall confidence level.
101. Expected changes to Viability, Survival, Stability, Growth and Fragility outputs where available.
102. New risks, removed risks and actions required before a decision.

DECISION BOUNDARY The recommendation may rank and explain proposals, but it must never automatically shortlist, reject, prefer, award or activate a contract.

10.5 Proposer-Side Intelligence

Before submission, the platform should optionally help the proposer test whether the proposal is commercially deliverable: profitability, cash required before payment, staffing/capacity, delivery timing and customer-concentration exposure. This output remains private to the proposer unless explicitly shared.

11. Integrations and Automation

11.0 Cross-Module Orchestration

Trigger	Automated result	Human control
---------	------------------	---------------

Trigger	Automated result	Human control
RFP/RFQ draft created	Create/update Saved Documents index and link canonical Procurement request	Authorised user reviews and publishes in Procurement
Proposal submitted	Freeze version; link Saved Document; create/update Sales activity and Procurement inbox item	Proposer confirms submission; recipient controls review
Proposal shortlisted	Create non-mutating evaluation/scenario references	Recipient selects shortlist and decides whether to run comparison
Proposal awarded	Link/create Vendor and Customer, link Offering, create existing Contract draft	Authorised requesting-business user awards exact version
Contract activated	Set proposal Contracted; update confirmed commitments and forecasts	Authorised parties approve/sign under existing Contract rules
Transaction recorded	Update actual revenue, expense, cash and related intelligence inputs	Existing transaction validation and permissions apply

11.1 Automated Award Workflow

103. Confirm the exact awarded ProposalVersion and authorised award action.
104. Identify both businesses by unique Business ID.
105. Find or create the proposer as Vendor in the requesting business's existing Catalogue context.
106. Find or create the requester as Customer in the proposer's existing Catalogue context.
107. Link Vendor, Customer, Offering, ProposalRequest, ProposalSubmission, ProposalVersion and ProposalDecision.
108. Open Business Operations - Contracts and create a prepopulated draft in the existing Contract feature.
109. Notify both businesses and record the orchestration result.
110. Require authorised human review and approval before contract activation.
111. After activation, update proposal status to Contracted and trigger live ontology/engine reassessment.

11.2 Contract Draft Mapping

Contract field	Proposal source
Parties	Requesting and proposing Business records
Reference	ProposalRequest, ProposalSubmission and awarded ProposalVersion IDs

Contract field	Proposal source
Scope and deliverables	Awarded structured proposal snapshot
Price and payment terms	Awarded commercial terms
Start/completion dates	Final negotiated proposal version
Responsibilities	Proposal roles/responsibilities and approved additions
Assumptions/exclusions	Awarded version
Validity and relevant terms	Awarded version plus Contract-feature rules

11.3 Automation Reliability

- 112. The award orchestration must be idempotent: retries must not duplicate Vendor, Customer, Opportunity or Contract records.
- 113. Record-level matching uses Business ID first and approved tenant mapping second; name matching alone is prohibited.
- 114. If an integration step fails, retain Awarded status, show a recoverable integration-pending state, and retry safely.
- 115. Partial success must be visible to authorised support users with a correlation ID and compensating/retry action.

12. Security, Privacy and Abuse Controls

12.1 Account and Marketplace Controls

- 116. Verified email and a sufficiently complete business profile before submission.
- 117. Proposal allowances by plan and trust level across different requests.
- 118. One active proposal per business per request, excluding revisions.
- 119. Recipient-defined intake caps, deadlines and invite-only options.
- 120. Rate limits for Apply, upload, generation, messages and invitations.
- 121. Duplicate and near-duplicate proposal detection; mass-submission behaviour monitoring.
- 122. Report, block, moderation, temporary suspension and appeal workflow.

12.2 Document Security

- 123. Allowlisted file types, explicit size limits and non-macro enforcement.

- 124. Malware scanning and quarantine before extraction or download.
- 125. Private object storage, encryption in transit and at rest, short-lived controlled download links.
- 126. Content extraction in an isolated environment with no execution of embedded code, links or instructions.
- 127. Prompt-injection defence: uploaded content is treated as untrusted data, never as system or developer instructions.
- 128. File checksum, access logging, retention/deletion policy and secure deletion of abandoned anonymous uploads.

12.3 Tenant and Data Privacy

- 129. All queries and services enforce tenant scope server-side.
- 130. Recipients see only data deliberately included in the proposal or explicitly consented capability indicators.
- 131. Private financials, capacity, Fragility scores, engine inputs and internal recommendations are never automatically disclosed across businesses.
- 132. Decision and evaluation access is restricted to authorised recipient roles.
- 133. Audit records capture access and decisions without reproducing confidential proposal bodies.
- 134. Data retention, deletion and export must align with platform privacy policy and applicable legal obligations.

13. Non-functional Requirements

Area	Requirement
Availability	Core viewing, submission and inbox paths use the platform production availability target; degradation of AI services must not corrupt proposals.
Performance	Public profile and inbox views should meet existing UI performance budgets. Synchronous validation should complete quickly; longer generation/extraction/scenario jobs use visible progress and resumable jobs.
Simulation	Use deterministic engine formulas and the existing stateless/non-mutating simulation pattern; target engine execution consistent with the existing <300 ms calculation requirement after inputs are ready.
Scalability	Queue document and AI work; avoid holding web requests open; enforce per-plan and per-tenant limits.

Area	Requirement
Reliability	Idempotent submission, payment return and award orchestration; no duplicate commercial records.
Auditability	Ruleset/model version, inputs, outputs, actor, proposal version and confidence are retained for material intelligence actions.
Accessibility	Keyboard-operable, labelled forms and dialogs; visible focus; readable errors; accessible status and comparison views.
Internationalisation	Store currency, timezone, locale and dates explicitly; do not assume GBP outside business/request context.
Observability	Structured logs, metrics and tracing by correlation ID without sensitive document content.
Recovery	Drafts and uploads are resumable; failed jobs can be retried safely; frozen submitted versions remain durable.

14. UX Requirements and Screen Inventory

14.0 Adopted Navigation Inventory

Area	Tabs / location	Proposal Intelligence placement
Business Blueprints	Overview; Business Plans; Proposals; Sales Documents; Saved Documents	Proposal generation, request-document drafting and the unified document library
Business Operations	Overview; Sales; Procurement; Contracts; Transactions; Reports	Submitted proposal activity, RFP/RFQ management, award, contract conversion and reporting
Marketplace	Business profile and request detail	Open for Proposals badge, requirements and Apply method chooser
Catalogue	Offerings; Customers; Vendors	Offering selection and automated commercial-party linkage

14.1 Required Screens

Screen	Purpose	Critical content/action
Proposal settings	Enable feature and modes	Mode multi-select, preferences, status preview, permissions
Procurement request builder	Create general/specific RFP/RFQ in Business Operations - Procurement	Requirements, criteria, deadline, visibility, cap, AI drafting option, publish
Marketplace card/profile	Signal openness	Status badge, accepted types, Apply
Request detail	Explain opportunity	Scope, outcomes, evidence, deadline, recipient, Apply

Screen	Purpose	Critical content/action
Method chooser	Select preparation route	Generate vs Upload; paid disclosure
Contextual signup	Capture new user	Opportunity retained; minimal account creation
Contextual upgrade	Convert eligible intent	Business/request context, Starter Insight, billing, Compare Plans
Blueprint proposal generator	Create proposal draft in Business Blueprints - Proposals	Offering selection, missing fields, draft editor, preview, approve
Upload/extraction	Structure external proposal	Scan status, extracted fields, confidence, correction, preview
Submission review	Final consent	Recipient, version, terms, disclosures, Submit
Procurement proposal inbox	Manage received proposals in Business Operations - Procurement	Filters, statuses, deadlines, unread, shortlist
Proposal detail/thread	Review and communicate	Document, structured data, timeline, actions, history
Comparison	Compare shortlist	Criteria, missing data, scores, trade-offs, selected scenarios
Scenario results	Understand impact	Base/downside/expected/upside, deltas, risks, confidence
Award confirmation	Confirm accountable decision	Exact version, implications, confirmation, audit reason
Contract draft handoff	Review automation output in Business Operations - Contracts	Existing Contract draft and linked entities
Saved Documents	Search and manage authored documents	Type chips, status, owner, updated date, usage link and permitted document actions

14.2 Required UX States

135. Loading, empty, no-results, permission denied, plan ineligible, request closed/expired, recipient cap reached and already-submitted states.
136. Unsafe/unsupported upload, extraction failed, low-confidence extraction, generation failed and scenario data insufficient states.
137. Payment pending, failed, cancelled and successful-return states with progress preservation.
138. Award integration pending/partial failure, contract draft ready and contract activated states.
139. Clear confirmation before withdraw, decline, award, block and contract activation; destructive actions identify consequences.

14.3 Adopted UI Consistency Requirements

- 140. Use the current EnterprateAI application shell: left navigation, top module search, workspace card, AI credits, restrained pale blue/lavender background, rounded white cards and indigo primary actions.
- 141. The selected top tab must be visually unambiguous through colour and underline while preserving consistent tab order across every screen in the module.
- 142. Business Operations Overview summarises commercial activity; individual tabs provide the source workflow and must not create parallel copies of the same record.
- 143. Saved Documents provides KPI cards for All Documents, Drafts, Ready, Approved and Archived, followed by a unified searchable/filterable library.
- 144. Saved Documents type filters include All, Business Plans, Proposals, Sales Documents and Request Documents.
- 145. Every Saved Documents row displays Document, Type, Status, Updated, Usage, Owner and Action; Usage deep-links to the canonical operational context.
- 146. Desktop mockups define the initial visual direction, but production screens must remain responsive and accessible rather than reproducing fixed pixel layouts.

15. Analytics and Success Measures

15.1 Product Funnel

Stage	Core metrics
Supply	Businesses Open for Proposals; published general/specific requests; category coverage
Discovery	Profile/request views; Apply click-through; method selection split
Acquisition	New signups from Generate/Upload; signup completion; saved opportunity rate
Monetisation	Contextual upgrade view; paid conversion; monthly/annual mix; payment abandonment
Proposal creation	Generation/upload starts; completion; validation failure; time to submit
Recipient engagement	View rate; response time; clarification/revision/shortlist rates
Decision	Comparison/scenario usage; preferred; negotiation; award; contract conversion
Quality and trust	Mandatory-fail rate; duplicate/abuse reports; block rate; extraction corrections; confidence distribution

15.2 Pilot Release KPIs

- 147. Qualified proposals per active request.

- 148. Proposal completion and submission conversion rate.
- 149. Free-signup and paid-plan conversion by Generate vs Upload path.
- 150. Median time from submission to first recipient action.
- 151. Shortlist, negotiation, award and Contract-draft conversion rates.
- 152. Scenario recommendation usage and decision-confidence feedback.
- 153. Abuse/report rate, false-positive moderation rate and unsafe upload rate.
- 154. Duplicate commercial record rate, which must be zero for correctly linked Business IDs.

Numeric launch targets must be set after baseline instrumentation or a pre-pilot benchmark. The PRD defines the measures but does not invent targets without evidence.

15.3 Analytics Events

Track at minimum: proposal_status_viewed, apply_clicked, method_selected, signup_started/completed, upgrade_viewed/selected/completed/abandoned, offering_selected/created, upload_started/scanned/extracted/corrected, generation_started/completed/failed, proposal_submitted, proposal_viewed, clarification_requested/responded, revision_requested/submitted, shortlisted, comparison_opened, scenario_run, recommendation_viewed, preferred, negotiation_started, awarded, contract_draft_created, contract_activated, declined, withdrawn, expired, report_submitted and block_created.

Events must include non-sensitive identifiers and funnel context. Do not include document body, financial values or private engine inputs in analytics payloads.

16. Acceptance Criteria

16.0 Information Architecture and Navigation

- 155. Given a user opens Business Blueprints, when the module loads, then the available tabs are Overview, Business Plans, Proposals, Sales Documents and Saved Documents in the adopted order.
- 156. Given a user opens Business Operations, when the module loads, then the available tabs are Overview, Sales, Procurement, Contracts, Transactions and Reports in the adopted order.
- 157. Given a requesting business creates an RFP/RFQ, when it saves the request, then the canonical operational record exists in Procurement and any generated request document appears in Saved Documents with a working Procurement usage link.
- 158. Given a proposer submits a generated or uploaded proposal, when submission succeeds, then one canonical ProposalSubmission is visible from proposer-side Sales, recipient-side Procurement and the related Saved Document without data duplication.

- 159. Given operational status changes in Procurement, Sales or Contracts, when Saved Documents is refreshed, then it displays the current linked status/usage read-only.
- 160. Given a user archives a Saved Document linked to an active workflow, when the action completes, then the operational Procurement, Sales or Contract record remains unchanged and accessible.

16.1 Marketplace and Request

- 161. Given an authorised business user selects proposal modes, when settings are saved, then the correct public status and Apply action appear.
- 162. Given no modes are selected, when the profile is viewed, then it shows Not Currently Open for Proposals and no active application path.
- 163. Given a specific request lacks a mandatory field, when Publish is selected, then publication is blocked and the missing field is identified.
- 164. Given a published request is materially revised, when saved, then a request revision is recorded and affected proposers are notified.

16.2 Generate and Upload Conversion

- 165. Given a new visitor selects Generate, when they create a free account, then the recipient/request is saved and a contextual Starter Insight upgrade is shown before generation.
- 166. Given an existing Free user selects Generate, when eligibility is checked, then generation remains locked and the contextual upgrade is shown.
- 167. Given a new visitor uploads a valid proposal, when extraction completes, then they can review it before signup; when Submit is selected, signup and then upgrade are required without losing progress.
- 168. Given an eligible paid user selects either path, when validation passes, then no upgrade interruption occurs.
- 169. Given payment is cancelled or fails, when the user returns, then the saved opportunity/upload remains available and no proposal is submitted.

16.3 Submission and Versioning

- 170. Given a proposer already has an active proposal for a request, when they attempt another submission, then the system opens the existing proposal and offers revision instead.
- 171. Given a valid proposal is submitted, when processing completes, then one frozen version, one receipt and one recipient notification exist.

- 172. Given a revision is submitted, when processing completes, then the proposal ID is unchanged, version number increments and earlier versions remain immutable.
- 173. Given the same submission request is retried, when the idempotency key matches, then no duplicate proposal or notification is created.

16.4 Evaluation and Scenario

- 174. Given a proposal fails a mandatory requirement, when evaluation runs, then the failure is visible and is not concealed by a weighted total.
- 175. Given a proposal is shortlisted, when scenario analysis runs, then Scenario/Simulation results are stored without changing live ontology values.
- 176. Given data is missing, when a recommendation is displayed, then assumptions, missing information and confidence are explicit.
- 177. Given multiple proposals are compared, when the recommendation is produced, then it explains ranking and trade-offs and performs no automatic status transition.

16.5 Award and Contract Integration

- 178. Given an authorised user awards a specific frozen version, when orchestration runs, then Vendor and Customer are linked/created by Business ID, Offering is linked and exactly one existing Contract draft is created.
- 179. Given the award workflow retries, when records already exist, then it reuses them and creates no duplicates.
- 180. Given a Contract draft exists, when no authorised human approves it, then it remains non-active and the proposal does not become Contracted.
- 181. Given the Contract is confirmed or signed, when activated, then proposal status becomes Contracted, links are complete and live ontology/intelligence reassessment is triggered.

16.6 Security

- 182. Given a user from an unrelated tenant requests a proposal or attachment, when authorisation is evaluated, then access is denied and logged.
- 183. Given an unsafe or macro-enabled file is uploaded, when scanning runs, then the file is quarantined/rejected and never reaches AI extraction.
- 184. Given uploaded text contains instructions aimed at the AI, when extraction/evaluation runs, then the text is treated only as untrusted proposal content.

185. Given a report or block is created, when enforcement applies, then further interaction is restricted without deleting audit evidence.

17. Delivery Plan and Release Gates

Phase	Deliverables	Exit gate
0. Design	Approved PRD, wireframes, ontology migration, API contract, threat model	Product, engineering, security and data owners sign off
1. Workflow MVP	Settings, requests, discovery, Upload, validation, inbox, status/versioning, notifications	End-to-end upload workflow passes tenant/security/UAT tests
2. Generation	Contextual upgrade, Offering integration, generation and extraction improvements	Paid entitlements, source traceability and recovery tested
3. Evaluation	Criteria, mandatory gates, shortlist and comparison	Explainability and evaluator consistency accepted
4. Intelligence	Scenario mapping, multi-scenario comparison, engine deltas, recommendations	No live mutation; deterministic/regression tests pass
5. Commercial conversion	Award, Vendor/Customer/Offering links, Contract draft and activation trigger	Idempotency, partial-failure recovery and human approval tested
6. Pilot	Limited verified businesses, support playbook and monitoring	Success, quality and abuse thresholds reviewed before broad release

17.1 Required Test Suites

186. Unit tests for eligibility, status transitions, request derivation, duplicate rules and scoring gates.
187. Integration tests for payments, Catalogue, Contract, storage, notifications, extraction and engines.
188. End-to-end tests for every user state across Generate and Upload paths.
189. Tenant-isolation, role/permission, file security, prompt-injection and rate-limit tests.
190. Idempotency and recovery tests for submit, payment return, notifications and award orchestration.
191. Regression tests proving scenario runs do not mutate live ontology and only confirmed contract events do.
192. Accessibility and responsive UX testing across required screens and error states.

18. Risks, Dependencies and Open Decisions

18.1 Key Risks and Mitigations

Risk	Impact	Mitigation
Paid gate causes drop-off	Lower submissions	Capture free signup first, preserve progress, show contextual value and measure by method
Low-quality or spam proposals	Recipient distrust	Verification, relevance checks, one-active rule, plan limits, caps, duplicate detection, report/block
AI fabricates capability claims	Commercial/legal risk	Approved sources, claim confirmation, traceability and user approval
Uploaded document attacks	Security/data exposure	Quarantine, scanning, isolated extraction and prompt-injection controls
AI recommendation over-trusted	Poor decision/accountability	Explainability, confidence, missing data, human-only commercial actions
Premature live-data mutation	Incorrect Fragility and forecasts	Strict scenario boundary and contract-activation event gate
Duplicate commercial records	Ontology inconsistency	Business-ID matching, unique constraints and idempotent orchestration
Cross-module status duplication	Conflicting UI and unreliable reporting	Canonical operational records, shared IDs, read-only projections and event-driven synchronisation
Request changes disadvantage proposers	Fairness/rework	Immutable request revisions, notification and deadline adjustment policy

18.2 Dependencies

193. Marketplace business profiles and role permissions.
194. Catalogue Offering, Vendor and Customer records with stable Business-ID linkage.
195. Business Blueprints document authoring/versioning and Saved Documents indexing.
196. Business Operations navigation and canonical Sales, Procurement, Contracts, Transactions and Reports records.
197. Subscription entitlement and payment return flows.
198. Existing Contract feature and contract approval/activation rules.
199. Private document storage, malware scanning and extraction pipeline.
200. Business Ontology, Assessment, Scenario, SimulationRun and Recommendation services.

201. Email/in-app notification service, audit/event infrastructure and analytics.

18.3 Decisions Required Before Build

Decision	Recommended default	Owner
Exact plan proposal allowances	Define per paid tier; revisions never consume another submission	Product/Commercial
Anonymous upload retention	Short, disclosed retention with automatic deletion if signup is not completed	Security/Legal
File-size limit	Set from security and infrastructure benchmark; display before upload	Engineering/Security
Budget visibility	Recipient chooses Hidden, Range or Exact	Product
Request revision policy	Notify active proposers and allow deadline extension/withdrawal	Product/Legal
Recipient evaluation weights	Provide defaults, allow authorised customisation, preserve version	Product/Data
Contract signature	Use existing Contract workflow; add external signature only as a separate approved integration	Product/Legal
Moderation SLA	Pilot-specific support coverage before broad launch	Operations

19. Product Approval Checklist

202. The PRD preserves the adopted user journey and all confirmed commercial rules.
203. The adopted Business Blueprints and Business Operations tab structures are implemented consistently.
204. RFP/RFQ operational ownership is Procurement; authoring and repository links do not duplicate workflow state.
205. Saved Documents acts as a unified document index and deep-links to canonical operational records.
206. Wireframes cover every actor/state in Sections 7 and 14.
207. Ontology and API designs enforce one active proposal per business per request, excluding revisions.
208. Generate and Upload conversion paths have separate, tested entitlement behaviour.
209. Scenario and Fragility integration cannot mutate live state before contract confirmation.
210. Award automation reuses the existing Catalogue and Contract capabilities.

- 211. Human approval is enforced for award and contract activation.
- 212. Security, abuse, tenant-isolation and audit requirements have named owners and test plans.
- 213. Pilot metrics and go/no-go thresholds are approved before launch.

APPROVAL RECOMMENDATION Approve PRD v1.1 as the build baseline after the decisions in Section 18.3 are assigned. The adopted information architecture, module ownership and UI direction are controlling requirements alongside the end-to-end user journey.

Appendix A - Source Traceability

Source	Use in this PRD
Proposal Intelligence Management Feature User Journey (adopted)	Actors, statuses, Generate/Upload journeys, validation, inbox, evaluation, scenario, award, Contract activation and product principle
Adopted EnterprateAI UI direction	Business Blueprints and Business Operations navigation, RFP/RFQ Procurement placement, Contracts/Transactions/Reports ownership and Saved Documents library
Updated Business Ontology	Existing Business, Offering, Customer, Contract, Opportunity, DemandEvidence, Assessment, Recommendation, Scenario and Simulation entities; non-mutating model
Real-Time Simulation Engine	Deterministic scenario recomputation, multi-scenario comparison, risk-aware outputs and performance direction
Survival, Stability, Growth and Viability engine designs	Proposal-to-engine mapping and explainable score/risk deltas

Appendix B - Minimum Structured Proposal Schema

Group	Fields
Identity	proposal_id, request_id/recipient_business_id, proposer_business_id, offering_id, version, method
Summary	title, executive_summary, requirements_response, proposed_solution
Delivery	deliverables, milestones, start_date, completion_date, capacity, responsibilities
Commercial	currency, price, pricing_model, taxes, payment_terms, recurring_cost, validity_date
Evidence	experience, references, certifications, attachments, verified indicators
Conditions	assumptions, dependencies, exclusions, risks

Group	Fields
Intelligence	extraction_confidence, missing_fields, mandatory_results, evaluation_id, scenario_ids, recommendation_id
Audit	created_by/at, submitted_by/at, source/model/ruleset versions, checksum, event correlation IDs
